Size 04 (D02) • Q_{max} 20 l/min (4 GPM) • p_{max} 320 bar (4600 PSI)

Technical Features

- 3-Way pressure compensator, spool-type, direct-acting with subplate interface acc. to ISO 4401, DIN 24340 (CETOP 02)
- > Modular design for vertical stacking assemblies with built-in load sensing shuttle valve
- Meter-in flow control models with load sensing from optional consumer ports
- > The valve keeps the pressure drop between the inlet and the pilot connection at a constant level
- Used as a load sensing valve with proportional directional and flow valves to control the flow rate independently of pressure variations
- > Excellent stability throughout flow range with rapid response to dynamic pressure changes
- Spring setting of the variable adjustment compensator can be varied from 5 to 40 bar (72.5 to 580 PSI)
- > Quiet and modulate response to load changes
- Hardened precision parts
- High flow capacity
- Adjustable by allen key
- In the standard version, the valve housing is phosphated and steel parts are zinc-coated for 240 h protection acc. to ISO 9227

ISO 4401-02-01-0-05

Ports P, A, B, T - max Ø 4.5 mm (0.18 in)

Functional Description

A normally closed, direct-acting, spring loaded 3-way pressure compensator valve in the form of sandwich plate. It consists of a body, a 3-way screw-in cartridge compensator TV2-043/S and a load shuttle valve. Ports A and B are always connected through the load shuttle valve with the spring chamber of the pressure compensator cartridge valve. Typically, 3-way pressure compensators are used as meter-in regulators in parallel with flow restrictor valves when raising or lowering variable loads at the same velocity is required.

The pressure compensator valve than keeps the pressure difference between its pressure inlet and the pressure at the output port of the regulated flow valve nearly constant. When the pressure differential exceeds the pre-set value, the pressure compensator opens and releases excessive flow from the main circuit to port B. If there is no flow demand from the consumer, the compensator allows the oil to flow back to tank and therefore vents the whole system. This prevents the hydraulic system from overheating especially in load sensing circuits with a fixed displacement pump.

Technical Data

Valve size		04 (D02)
Max. operating pressure	bar (PSI)	320 (4640)
Max. flow	l/min (GPM)	20 (4.2)
Control pressure differential	bar (PSI)	5 40 (72.5 580)
Fluid temperature range (NBR)	°C (°F)	-30 +100 (-22 +212)
Fluid temperature range (FPM)	°C (°F)	-20 +120 (-4 +248)
Mass (All models)	kg (lbs)	0.6 (1.32)

Characteristics measured at $v = 32 \text{ mm}^2/\text{s}$ (156 SUS)

Regulated flow related to input pressure

TV2-043/MC Meter-in compensator

The characteristic of the pressure compensator corresponds to the flow rate of a PRM2-043Z11/12 proportional directional valve.

If the pressure resistance increases due to a flow rate increase, the pressure differential also has to increase in order to ensure correct regulation.

Application Example

Meter-in compensator

Functional Symbols

C

- ① valve side
- Subplate or manifold side

Notice: The orientation of the symbol on the name plate corresponds with the valve function.
